WARNING: ABSENCE OF THE FOLLOWING SECURITY FEATURES MAY INDICATE ALTERATION.

- Tamper resistant background ink shows attempts to alter script.
- Hidden security "VOID" appears when photocopied.
- Copy resistant security pantograph discourages duplication.
- Thermochromatic ink printed on front, disappears when rubbed or heated.
- High security watermark on reverse side, which cannot be copied.
- Type on backer, in coin reactive ink, appears when rubbed with a coin.
- MicroPrint Security Borders fill in to form a solid line when copied.
- Reverse printed RX in upper corners of pad drop out when photocopied.
- Individual numeric identifier so lost or stolen pads can be invalidated.
- Each sheet is sequentially numbered for record keeping.
- Warning bands on front of script detail security features.
- Penetrating ink is used to prevent chemical "lifting" of information.

FEATURES

- A** • MicroPrint Security Borders: minute printing of a security message along the edges of a pad that fill in to form a solid line when digitally scanned or xerographically copied; also used in printing US currency.
- Reverse printed RX (lighter colored) in opposite corners of pad drop out when photocopied to appear white.
- B** • Copy resistant security pantograph discourages duplication by high end photocopier.
- Tamper resistant background ink shows attempts to alter script by patient.
- Hidden security "VOID" appears when photocopied.
- C** • Thermochromatic ink box changes to white when rubbed or heated.
- D** • Each order has an individual numeric lot identifier so lost or stolen prescription pads can be invalidated.
- E** • Each sheet is sequentially numbered for internal and state-mandated record keeping.
- Penetrating magnetic ink is used to print your information on the script preventing chemical "lifting" of information during forgery.
- F** • Security features warning bands on front and back of script detail hidden and overt security features.
- All secure scripts have a high security watermark on reverse side which cannot be copied and can only be seen when held at a 45 degree angle to a light source.
- Coin-reactive ink on backer - validate authenticity by rubbing with a U.S. coin.
